

Joong San Jun (Jayden)

Online CV link:

First of all I thank you for the interest in my resume and application. I am excited to apply for a job position in this field of career within your organisation. I have recently successfully graduated IT majoring computer science from Queensland University of Technology (QUT) and is ready to start building web application for your company. I believe that I can contribute to the web development section of your organisation as junior or equivalent position.

I aim to make my career and focus in the web development section. Through university, I have obtained necessary skills to develop web application such as HTML, CSS, JavaScript and as well as some of challenging languages such as C, C#, C++, Java and more. Language called Ruby on Rails (which I have obtained through external course from community called LikeLion) will be my strongest and main skill to use when it comes to web development. LikeLion has provided me with a way that I can develop a web service using Ruby on Rails. Extending the learning outcomes from LikeLion, I am now at the teaching position for this community (voluntary work). I am always eager to learn, always seeking for new opportunities and excited to learn any new skills and programming techniques that I am not aware of.

I am looking forward to greet you in person and discuss more about the job position and myself. It would be my pleasure if you could have a look at my resume as well as online CV which I have created (link will be on top of the cover letter).

Sincerely,

Jayden Jun
